## VETERINARY EXAMINATION FOR DYNAMIC SYNDICATIONS

At the request of Dynamic Syndications, a pre-sale veterinary examination of **Lot 310, HIGH CHAPARRAL ex COOGEE CROWN Bay yearling filly**, brands as described in the 2013 Inglis Melbourne Premier Yearling Sale Catalogue, was carried out at the Inglis Sales Complex Oaklands Junction VIC, on the 1<sup>st</sup> March 2013, prior to the commencement of the Yearling Sale.

### Clinical Examination:

This is a high class filly. The filly was an athletic and strong type, presented in excellent condition. Importantly she was very well conformed with excellent bone (\*These aspects have been noted in this report as conformation and bone density can often be lacking in progeny by this sire). Her forequarter has good angulations to shoulder and pasterns. She has excellent strength to her hindquarter. She was very well balanced with good length of rein. She is a filly that stands over good ground with an easy flowing action at the walk. The filly is still immature and will develop further. When fully mature, he is expected to reach an above average height of approximately 15.3 hh. All clinical parameters were found to be within normal limits. She was examined in hand, and was found to be free moving. Stethoscope examination of heartbeat was normal. There was no clinical evidence of wear or injury to her extremities. There was no response to flexion tests.

### Radiographic Examination:

Pre-sale there was a full set of radiographs available for inspection in the repository at the Inglis Sales Complex. Upon examination, I advised the client that in my opinion they were low risk as there were no radiographic findings of any significance noted.

### Endoscopic Examination:

Post sale the upper respiratory tract was examined endoscopically and the larynx and pharynx were found to be normal in appearance and function.

### Conclusion:

In my opinion, at the time of this examination, **Lot 310, HIGH CHAPARRAL ex COOGEE CROWN Bay yearling filly**, is in so far as can be determined from the extensive examination conducted; suitable for racing and public syndication and as such, is therefore suitable for all risk mortality insurance cover. I confirm that I advised my client Dynamic Syndications that in my opinion this lot was suitable for their purchase.

Yours faithfully,

**Dr. T.M.B. Roberts BVSc. MRCVS**  
**7 March 2013**

NB: This examination is valid for seven (7) days and is only for the use of the person requesting the examination. The issuer of this certificate has no financial interest in the above horse and no contract with any other third party. The issuer has a long standing relationship with Dynamic Syndications to provide a detailed veterinary assessment and specific advice on suitability of prospective yearling purchases at all yearling sales within Australasia.

## VETERINARY EXAMINATION FOR DYNAMIC SYNDICATIONS

At the request of Dynamic Syndications I re-examined the **HIGH CHAPARRAL / COOGEE CROWN bay yearling filly**, brands Reverse Capital E conjoined with Capital P between two horizontal wave lines nr. Sh., 63 over 1 off sh., at Oakridge Spelling Farm, The Oaks, NSW on 16 April 2013, to assess its continued suitability for public syndication. The purpose of the re-examination request was for the promoter to comply with regulatory requirements to supply a current veterinary certificate for inclusion with their PDS to Racing NSW.

I had previously inspected this horse on behalf of Dynamic Syndications at the William Inglis Melbourne Premier Yearling Sale on the 1<sup>st</sup> March 2013 where a detailed inspection including a full set of x-rays were read and post sale endoscope was performed and I advised the client the horse was in my opinion suitable for purchase.

### Clinical Examination:

The re-examination performed was a general health check which included temperature, pulse, respiration, cardiac, thoracic auscultation as well as eyes for sight, mucous membrane, colour and musculature symmetry and basic conformation where no abnormalities were found.

There was no lameness at the walk and trot and no response to hoof testers was found. On palpation and manipulation of the legs and major joints no abnormalities were found.

No radiographs, blood tests, drug sampling, ECG or upper respiratory endoscope were performed.

In my opinion the filly remains a high quality individual, athletic and free moving. She is well conformed and well balanced. For her foal date she is a well grown and strong filly. She is still immature and will develop further. All clinical parameters were found to be within normal limits.

### Conclusion:

In my opinion, on the 16<sup>th</sup> April 2013 at the time of this re-examination, the **HIGH CHAPARRAL ex COOGEE CROWN 2011 bay yearling filly** is in so far as can be determined from the examination conducted, remains suitable for all risk mortality insurance cover, suitable for racing and public syndication.

Yours faithfully,

**Dr. T.M.B. Roberts BVSc. MRCVS**
